

Privacy policy AquaApp

The AquaApp connects via a user's active choice to establish connection to a cloud hosted server. The connection is made over a secure Hypertext Transfer Protocol Secure (https) layer with valid certificates from DigiCert. The data are related to rotated equipment and are mainly configuration and settings related. No data are stored in the AquaApp. (All data are stored locally in the equipment at site with the rotated equipment.)

User data, such as username and password, are stored in the cloud server. AquaApp stores no user data.

AquaApp do not share or distribute any data to any third part.
AquaApp do not in any way disrupt other apps.
